

Panel Finedust/HEPA Filter Type GP

<u>Features</u>

- HEPA efficiencies of 95% up to 99.99995% (@ 0.3 μm).
- Finedust efficiencies of 60% up to 98% ASHRAE.
- High quality micro fibreglass paper.
- Lowest initial pressure drop.
- Rigid frames.

FILT AIR Ltd.

Zikhron Yaaqov 30951 P.O.B. 166, Israel

Tel.: +972-4-6299999 Fax: +972-4-6299900 e-mail: export@filt-air.com http://www.filt-air.com

The GP filter is designed and tested to extract the smallest particles out of the air. The GP series contains a fibreglass media pack in four (4) different heights (47mm, 56mm, 70mm, 93mm) and in different kinds of extruded aluminum frames.

The filter media is pleated in "Minipleat shape" with a new application technology of "Hot Melt Spacers" to achieve lowest pressure drop results.

Features

- Frame heights of 70mm up to 197mm.
- High quality standard due to Quality
 Assurance System.
- HEPA filter tested by laser particle counting system.
- Highly economical through high final pressure drop.
- For use in clean rooms up to class 1.
- Usable in two flow directions.

Finedust - HEPA Filter Type GP

- HEPA efficiencies of 95% up to 99.99995%
 (@ 0.3 µm)
- Finedust efficiencies of 60% up to 98% ASHRAE
- High quality micro fibreglass paper
- Lowest initial pressure drop
- Rigid frames
- Frame height of 70 mm up to 197 mm
- High quality standard due to Quality Assurance System
- HEPA filter tested by laser particle counting system
- Highly economical although high final pressure drop
- For use in clean rooms up to class 1
- Usable in two flow directions

Design

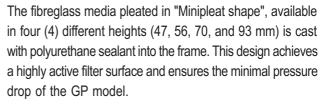

The filter frame is made from anodized extruded aluminum profile with two angles in each corner to get a rigid straight filter.

Each of the different types of extruded aluminum profiles contains a few sealant anchors to prevent any leakage between frame and media during the filter life.

Furthermore, there are features available such as a knife for fluid seal connection or the fluid seal on the filter.

All types of GP filters are available with one or two screens and EPDM gaskets.

Testing

Each HEPA filter is tested and packed in accordance with American Standard IEST-RP-CC001.3 (HEPA and ULPA Filters) or in accordance with the European standard EN 1822 -1, 4&5 (Testing filter elements HEPA and ULPA efficiency and scan method) or customer requested testings.

The prefilters are tested in accordance with European Standard EN 779 (Particulate air filters for general ventilation). This standard is based on ASHRAE 52.1 (Gravimetric and Dust-Spot Procedures for Testing Air Cleaning Devices Used in General Ventilation for Removing Particulate Matter 1992).

XY - Scan Testing Device

Filt Air XY-scan testing device is able to perform automated filter leak testing of high efficiency air filters using automatic particle counters and a motorized scan table. While the particle counter probe passes over the filter face, the computer compares the counted particles with the given leak tolerance setting. In addition it calculates the overall efficiency for each checked filter and measures the pressure drop @ nominal airflow.
